

# Images

Added into HTML as content with `img` tag or to an element using the `background-image` property in css.

```
>
```

```
.logo{  
    background-image: url("images/logo.png");  
}
```

# Images

- `src(html)/url(css)`
  - Location of the image, use relative path unless the image is hosted on another site.
- `alt(html)`
  - Alternative text, used by accessibility tools and search engines, and shown if the image does not load. Always have this.
- Set sizes and style images in css.

## Border radius

Rounds the corners of a container.

```
border-radius: 50%; /* makes the element completely round */  
border-radius: 20px; /*rounds all corners*/  
border-radius: 20px 70px; /* top left and bottom right 20px, top right and bottom left 70px*/  
border-radius: 20px 50px 30px 10px; /*set specific rounding for each corner*/
```

## Styling images

```
.logo {  
  background-image: url("images/hero.png");  
  width: 95vw;  
  height: 50vh;  
  filter: blur(5px);  
  opacity: 50%;  
  background-size: cover;  
  background-repeat: no-repeat;  
}
```

## Font awesome

Free icon library we can use on our websites.

```
<i class="fa-beat fa-solid fa-heart"></i>
```
