Creating HTML

localStorage

Store information on the site.

```
localStorage.setItem("name", "Henrik");
localStorage.getItem("name"); // returns "Henrik";
localStorage.removeItem("name"); // Removes the key name, and values inside
localStorage.clear(); //removes all information in local storage
```

```
if (localStorage.getItem("mode")) {
    setMode();
} else{
    localStorage.setItem("mode", "light")
}
```

data

```html
<div class="content" data-id="1">Content</div>
<div class="content-2"data-id="10">Content<div>
```

```javascript
const content = document.querySelector(".content");
console.log(content.dataset.id);

const content2 = document.querySelector(".content-2");
console.log(content2.dataset.id);
```

Creating in loop

```
const objArray = [
    {id: 1, name: "object-1"},
    {id: 2, name: "object-2"},
]
for (let i = 0; i<objArray.length; i++){
    document.querySelector("body").innerHTML +=
    `<h2>name: ${objArray[i].name}</h2>
    <p>id: ${objArray[i].id}</p>`
}
```
