Introduction

Arranging code

- Folders are part of the filename

- Good arrangment makes it easier for ourselves and others to understand programs.

- https://example.com == https://example.com/index.html

Filetypes in web development

- HTML
- CSS
- JS
- Other filetypes for assets.

Example

Name	Date modified	Type	Size
📁 css	1/3/2023 10:51	File folder	
📁 js	1/3/2023 10:51	File folder	
🌐 index.html	1/3/2023 10:52	Chrome HTML Do...	0 KB

Index files

- Landing page

- Root folder

- Host service decides what names can be used. (index.html, home.html, start.html)

URL

- Location of folder on a server

Adding scripts

```
<head>
    <script defer src="/js/script.js"></script>
</head>
```

or

```
<body>
    <!-- Your html content -->

    <script src="/js/script.js"></script>
</body>
```

Development console

Open with

- Right click > inspect

- f12

- ctrl+shift+j

console

- Shows error messages

- Test functions and check variables (scripting)

JavaScript

```
// One line comments

/* multi line
comments */
let semikolon = ";"; //Are "optional" but use them.
```
